# 1 Getting Ready

## 1.1 What you will need

## 1.2 Installing the files

Place the lawcite Biblatex definition files (lawcite.dbx, lawcite.bbx, lawcite.cbx, english-lawcite.lbx), and an index style file for SplitIndex to use (e.g., plain.ist), in a location where T<sub>E</sub>X can find them, for example, in the current folder.

McGill-style is activated via option settings when calling the Biblatex package.

```
\usepackage[  
style=lawcite,  
lawcitestyle=mcgill,  
use-toc-parnumrefs=false,  
...  
{biblatex}
```

Settings used by lawcite may be changed inside the document, as well.

## 1.3 The Workflow

To compile a file *foo.tex*, do:

- xelatex/lualatex/pdflatex
- biber (collect bibliographic data)
- xelatex/lualatex/pdflatex (resolve citations, insert Table of Contents, Bibliography; page numbers change)
- splitindex (create the ToC etc files)

```
splitindex foo -- -s plain.ist -c
```

- xelatex/lualatex/pdflatex (Table of Cases is inserted; page numbers change)

- `splitindex` (pick up the new page numbers)
- `xelatex/lualatex/pdflatex` (refresh the ToC, and any cross-references)

The index style file (for the Table of Cases, etc), is a plain dot-fill style:

```
delim_0 "\\space\\dotfill\\space "\\hss
delim_1 "\\space\\dotfill\\space "\\hss
delim_2 "\\space\\dotfill\\space "\\hss
delim_n ", "
delim_r "--"
delim_t ""
encap_prefix ""
encap_suffix ""
```

## 2 How **lawcite** works

### 2.1 McGill settings

For a behind-the-scenes look, in terms of on/off switches (that is, where there is a typographical choice), the McGill style is defined as follows: party names are italic, party separator (the “v”) is also italic, and not dotted, main citation method is footnoting, square brackets are not used for the year component of medium neutral citations, and so on...

```
\newcommand\lcsetstylemcgill{%
  \togglefalse{partysepdotted}
  \toggletrue{partysepitalic}
  \toggletrue{partynamesitalic}
  \setcounter{reftypemode}{3}
  \togglefalse{mncbrackets}
  \toggletrue{statttycomma}%after the title
  \togglefalse{statttyitalic}
  \togglefalse{statjurisdiction}
%  \toggletrue{statutecomma}%after the title
  \toggletrue{commainindex}
  \toggletrue{multicitecomma}
  \toggletrue{casenamecomma}
```

```

\renewcommand\postnotedelim{\ }
\togglefalse{ljarttitleitalic}
\toggletrue{ljjnltitleitalic}
}

```

Other components of style depend on data input and/or user choice (the decision year if different to the reporting year); or ‘fixed’, in the sense that there is only one layout (like using “/” for some provincial regulation formats to separate regulation number and year, or year and regulation number). Coding can be done to the  $n^{\text{th}}$  degree, but, at some point, practicality switches on.

## 4 Statutes

### 4.1 Bibentries

Ordinary statutes: `\lawcite{fla}`

*Family Law Act*, SA 2003, c F-4.5

```

*Territorial Lands Act*, RSC 1985, c T-7, s 3

*Fair Trading Act*, RSA 2000, c F-2

*Safe Drinking Water Act*, 42 USC §300f (1974)

This last uses the semantic structure of the @statute bibentry:

<i>title</i> ,	year	(jurisdiction)	(note)
----------------	------	----------------	--------

to store

<i>Safe Drinking Water Act</i> ,	42 USC §300f		(1974)
----------------------------------	--------------	--	--------

The year value 1974 could just as easily have been stored in the jurisdiction field, with no note field, to produce an identical result.

To display the jurisdiction for non-Canadian statutes, do:

```
\toggletrue{statjurisdiction} or \setstatjurison
```

*Law of Property Act*, 1969 (UK)

```
\togglefalse{statjurisdiction} or \setstatjurisoff

*Alberta Forest Land Use and Management Regulations*, Alta Reg 197/1976, s 2

Because of the multiplicity of regulation format types, in the data structure, using the `citeref` field in the `@statute` bibentry is the more flexible method since it can process both (Canadian) statutes and regulations in one sweep; although, the ‘traditional’ statute fields can still be used, but operate only at the level of statutes, and regulations that look like statutes.
