Text at para 12

The difference between a case shortname
(citation command `\lccasesn` for fields shipname or partya),

and a case short title

(citation command `\lcshorttitle` for fields shipname, caseshortname, partya)

is that a case short title is a user-defined shorthand for the case name.

For example, *R v SCC*, 2021 YKCA 4 [“*the assistance of counsel case*”] can be referred to as *the assistance of counsel case* after the first citation. Or in footnote format, once the case is introduced¹, one can say:

...as was said in *the maintenance case* at para 15:

“A leave decision merely permits a party to argue the issue. It is in no way a promise by the court to actually vary the order.”
