Lawcite
QuickStart Guide
Exercise 3
Numbered Paragraphs

———

Table of Cases

Table of Statutes

Table of Regulations

————————————

[1] The lawcite QuickStart Guide Exercise Pack consists of three exercises. Exercise 1 illustrates the different styles available to the citation commands. Exercise 2 demonstrates how to produce the Table of Cases and a general index. Exercise 3 (this one) demonstrates the use of numbered paragraphs.

[2] Compile this document as per the orevious exercises, with with (xe/lua)latex, biber, (xe/lua)latex, splitinex, (xe/lua)latex.

[3] Add the code in listing 1 to the document preamble.

```
%Numbered paragraphs
\newcounter{parno}
\renewcommand{\theparno}{\arabic{parno}}
\newcommand{\p}{\refstepcounter{parno}%
\noindent[\theparno]\ }
\setcounter{secnumdepth}{4}
\setcounter{parno}{0}
```

Code listing 1: Defining the paragraphing numbering command,
\p

[4] To enable cross-referencing, put the code in listing 2 also in the preamble.

[5] To get the paragraph numbers at citation into the Table of Cases, put the code shown in listing 3 also into the document peramble.

[6] When running the SplitIndex step, format the Table of Cases paragraph numbers with the index style file code shown in listing 4.

```
%numbered paragraphs cross-referencing method
\newcommand\definname{para}
\newcommand{\paradef}[1]{\label{#1}}
\newcommand\pararef[1]{\definname\ [\ref{#1}]}
```

Code listing 2: Cross-referencing commands

```
%-----------------------------------------------------------
\AtWriteToIndex{cases}{\let\thepage\theparno}
\AtWriteToIndex{legislation}{\let\thepage\theparno}
\AtWriteToIndex{regulations}{\let\thepage\theparno}
%-----------------------------------------------------------
```

Code listing 3: Writing para numbers to the indexes.

[7] Change the index preamble to produce *Para* instead of *Page* (listing 5).

Examples

[8] Citations. Example of usage. The first case is also mentioned in para [14].

Cases

snail

Index Style File

[21] To prevent spurious spaces appearing in the ToC after **[** for long citations because the default line length in the index file is 72 characters followed by a newline beginning with two tabs (to make the index file human-readable), set `line_max` in the index style file (.ist) to a larger number.
